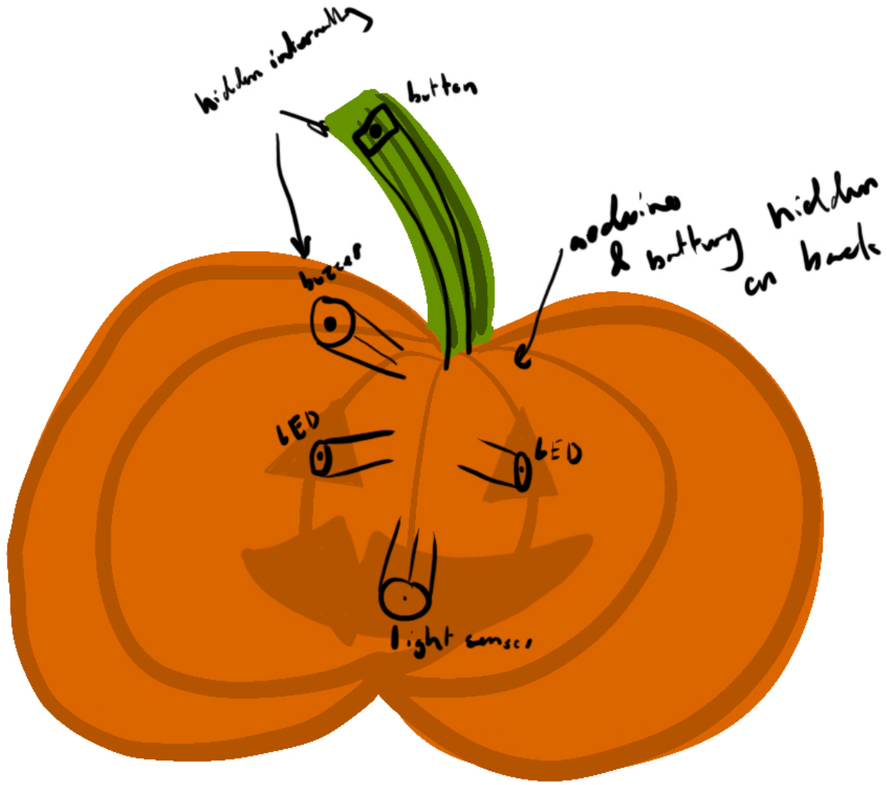
Schnapsen Cheater Pumpkin Eater

Supplies I'll Use:

Orange and green felt
Light sensor
Buzzer
2 green LEDs
Conductive thread
Filling

How it'll work:

The button input will be encoded;
short press — 1 points
Long press — 10 points
The outputs will get progressively higher pitched as you get closer to 66 points



Have you ever wanted to cheat at Schnapsen and do away with an important difficult part of the game?

This device will count to 66 for you with a button input, and warn you with a quiet audio output at point values of your choice. You might ask: what if I'm caught?!? Well the Schnapsen Cheater Pumpkin Eater will only work hidden under the table. If you're opponent pulls it out into the light it's counting function will be hidden and the eyes will turn green to show how harmless it is.
